

Anti-Phishing Phil Training Game

Teaches Employees How to Identify Malicious URLs

10-minutes of training can reduce the chance of your employee falling for a phishing attack by over 50% compared to traditional training methods! To drive lasting change in employee behavior, cyber security training must be engaging, efficient and effective.

Classroom training lectures are ineffective; online video training doesn't work. Static cyber security training emails don't work. What works to reduce the number of people clicking on dangerous URLs? Wombat's Anti-Phishing Phil training game does!

Developed using learning science principles, Anti-Phishing Phil is a SCORM-compliant computer security training game that teaches employees and customers to recognize fraudulent URLs. In just 10 minutes of play, the user makes decisions on the safety of 32 different URLs links. When employees make a mistake they learn why—immediately.

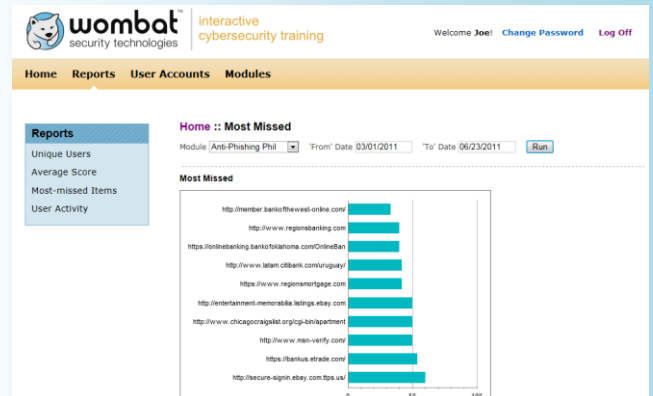

The latest release of the product incorporates a number of recent phishing attacks and the links used in the attacks. The game can also be customized to incorporate attacks that companies have seen themselves to ensure that employees are prepared.

“The ability of subjects who had played the game to distinguish legitimate URLs from fraudulent ones improved nearly twice as much as that of those trained with standard materials.” - Scientific American

Best of all, Anti-Phishing Phil training makes a lasting impact. According to the Scientific American article “How to Foil ‘Phishing’ Scams,” which featured Anti-Phishing Phil, “the ability of subjects

who had played the game to distinguish legitimate URLs from fraudulent ones improved nearly twice as much as that of those trained with standard materials.”

Like Wombat's other products, Anti-Phishing Phil offers extensive reporting functionality to enable security professionals to track the performance of users and target training appropriately.

You can deploy Anti-Phishing Phil on your intranet. You can also choose to customize the game by licensing a version with your organization's branding and specific URLs. A 508-compliant version is also available.
